

# End of day Clean up *“Turn the lights off when you leave”*

1. Go to AWS console > CloudFormation
  - a) Delete Main Stack for the data lake
    1. Check on main CloudFormation stack Action “Delete Stack” then Yes Delete Stack
    2. Let this run once it completes and fails Repeat step a.1 delete stack (ensure you check delete/remove S3 buckets if prompted)
2. Delete Kinesis Stream & Lambda function from lab 1
3. Delete EMR & Redshift clusters from Lab 2
4. Delete SageMaker Notebook, Model, Endpoint & S3 buckets for ML Training & output
5. Delete Database Migration Server instance & SQL Server instance
6. Verify CloudFormation stack for data lake & DMS lab have been removed/delete
7. Verify all buckets in S3 related to the workshop are deleted
8. Unsubscribe Quicksight
